

AI Platform Modules & Workflow

Module 1: Shared Intelligence Layer

1. Upload product documents, FAQs, and policies.
2. Store them in a searchable knowledge base.
3. Analyze any complaint or post.
4. Identify the issue, urgency, category, and likely cause.

Module 2: Internal Resolution Pipeline (ResolveX)

1. Receive customer complaints (email, chat, tickets).
2. Fetch customer details and history.
3. Measure business impact (revenue, churn risk, priority).
4. Recommend the best resolution (refund, replacement, escalation, etc.).
5. Execute the action or send it for human approval.

Module 3: External Discovery Pipeline (GhostLead)

1. Monitor Reddit, GitHub, forums, and other communities.
2. Detect relevant posts.
3. Check whether the product solves the problem.
4. Generate a technical response.
5. Verify tone and compliance.
6. Forward qualified leads to sales.

Module 4: Learning & Analytics Layer

1. Collect internal complaints and external discussions.
2. Find recurring patterns.
3. Correlate internal and external issues.
4. Generate insights and recommendations.

Module 5: Orchestration & Governance

1. Receive incoming requests.
2. Route requests to the correct module.
3. Coordinate agent communication.
4. Trigger human approval when needed.
5. Track workflow status and outcomes.

Module 6: Dashboard & Reporting

1. Display complaint resolution status.
2. Display discovered leads and responses.

3. Show unified insights.
4. Provide reports and performance metrics.
